- (54) Title: FUEL CELL WITH FUEL SUPPLY DEVICE AND METHOD FOR PRODUCING THE SAME
- (54) Bezeichnung: BRENNSTOFFZELLE MIT BRENNSTOFF-BEREITSTELLUNGSEINRICHTUNG UND VERFAHREN ZUR HERSTELLUNG

(57) Abstract: The invention relates to a fuel cell which comprises a first electrode(3) and a second electrode (4), one of which is configured as the cathode and the other as the anode, and a layer (5), permeable at least to protons, that has a catalytic effect or that additionally comprises a catalytic material in the area between the first electrode (3) and the second electrode (4). The fuel cell further has a fuel supply device for supplying a fuel (H<sub>2</sub>), and a reactant supply device for supplying a reactant (O<sub>2</sub>) which reacts with protons from the fuel (H<sub>2</sub>) to generate a current. The fuel supply device and the reactant supply device are disposed on the first electrode's end or the second electrode's end. The aim of the invention is to provide compact fuel cells having a limited current capacity. This aim is achieved in that the fuel (H<sub>2</sub>) for generating a defined quantity of electricity is integrated into the material of one of the electrodes (3) configured as the fuel supply device (3) and/or into a neighboring layer thereof. Alternatively, the reactant can be correspondingly integrated into a reactant supply device of the above-described type.
